

Food and beverage quality testing

Sample preparation that is accurate, reliable, and fast.

Quality, consistency and safety

Cytiva is committed to quality. Our Whatman™ brand products are manufactured from high-purity raw materials, and our factories all operate to the latest version of ISO 9001 standards. Our filter selection recommendations are built on the combination of expertise in modern methods and almost 300 years of history in the paper and membrane filtration business.

Cytiva's Whatman™ filtration products bring efficiency and accuracy to food and beverage testing, standardizing and streamlining lab workflows and reducing the number of filtration devices required, delivering reliable results to assure consumer product quality, consistency and safety.

Cellulose filter papers and products

Key application: clarification and solids retention

Various test methods require that liquid components of a solution be separated from suspended solids prior to analysis. Cytiva offers a wide choice of cellulose filter papers with different flow rates, loading capacities, and chemical resistances to support these applications.

Key application: clarifying sugar solution

Whatman™ Grade 5 qualitative filter papers have been shown to support ICUMSA methods GS 1/3-7 and GS 2/3-18 for color (filtrate clarity) and turbidity.

Key application: degassing carbonated beverages

Gas bubbles can interfere with accurate colorimetric analysis. Whatman™ Grade 2V cellulose paper has been shown to remove over 77% of CO₂ from a filtered sample. This filter also comes pre-pleated to save setup time.

Qualitative filter paper

Nitrogen, phosphorous, and lipid analysis

Key application: nitrogen analysis

Nitrogen content analysis is typically done with Kjeldahl techniques, which involve the sampling of an exact amount of sample before transfer to a digestion tube. Low nitrogen content weighing paper makes the sample transfer easy and quick without loss of material and with minimal interference with the end result. The sample might need to be filtered through a Whatman™ brand qualitative filter paper prior to analysis.

Key application

What are you testing for?	Method	Product
Nitrogen	Kjeldahl analysis	Weighing boats, weighing paper
Trace elements	Various	Glass or cellulose filter paper
Phosphorus	Colorimetry	Grade 512 ½ pre-folded low phosphate filter paper
Lipids	Soxhlet extraction	Cellulose thimbles

Low nitrogen content weighing boats

Key application: trace element extraction

Most trace element tests are based on extracting a sample and measuring the concentration of trace elements in the liquid phase. Extraction methods can vary between laboratories. The sample then generally needs to be filtered through a qualitative filter paper (p. 4) or glass fiber filter (p. 14) to make sure it will not clog nebulizers or interfere with injection into the analysis instrument. If digested with aqua regia, the sample might be filtered through an ashless filter paper. If syringe filters are used as an additional sample preparation step, please see page 18.

Key application: phosphorus analysis by colorimetry

To determine the phosphorus content, the sample is extracted with a chemical solution and the phosphorus content in the extract is measured by colorimetry. Filtration of the extract through a qualitative filter paper is generally needed before analysis, please see page 8. If an automated method is used for determining phosphorus concentration, acid-resistant filter paper might be needed.

Key application: acid testing

Determination of acid presence and concentration in beverages such as wine can be performed by applying a sample of the liquid to chromatography paper. Allow the paper to separate acidic content, and then dry the paper. The acids that are present in the sample can then be determined by the spots on the paper.

Key application: Soxhlet extraction for lipid analysis

Food samples can be prepared for lipid analysis using Soxhlet extraction. Extraction thimbles are widely used for Soxhlet techniques. After extraction samples can be re-filtered with a 0.45 µm filter to remove small particles in order to protect your analytical instrument. Standard extraction thimbles have a wall thickness of 1–1.5 mm. Double-thickness thimbles have a wall thickness of approximately 2 mm for applications that require higher retention, increased wet or dry strength, or increased rigidity. Measurements can be matched to specific Soxhlet extractor systems.

Filtration membranes

Key application: microbial detection and enumeration

In addition to the immediate risk to public health, microbial contamination of food and beverages impacts manufacturers through costs of spoiled product, damage to reputation, and loss of customer confidence. Membrane filtration (MF) technique originated as a methodology for water quality testing and was quickly recognized as a reliable and adaptable method for food and beverage testing. If the sample can be rinsed or dissolved such that the resulting solution has little to no remaining solids, then it can be examined for microbial contamination by filtering through a membrane filter. MF technique can be used for detection and enumeration of a wide range of organisms with the benefits of:

- Concentration of target organisms
- A wide choice of membranes
- Separation of target from inhibitory substances
- Use of rinse buffers to further neutralize inhibition

Key application: filterability testing

Filterability testing is used to determine bottling readiness of wine. Non-sterile 0.45 µm membrane filters are used with positive or negative pressure to filter several liters of wine while recording fluid flow rate.

Microplus membrane filters

Glass fiber filters

Key application: moisture and solids analysis

The processes for measuring moisture in food or solids in water are quite similar. In both cases a sample is placed on a filter and weighed. It is then heated to evaporate any water present and weighed again. The difference between the two measurements is the moisture content, and the final weight is the solids content.

What are you testing for?	Product	Characteristics and benefits
Moisture content of foodstuffs	Moisture test paper	90 mm borosilicate glass circle - Designed for use with common moisture analysis methods

Key application: sample clarification

934-AH™ glass microfiber filters are designed for fast and effective clarification of a large amount of aqueous solutions gravimetrically as specified in ASBC method, Wort 9B. GF/C™ or other glass fiber filters can also be used.

Key application: determination of total aflatoxins in olive oil, peanut oil and sesame oil

Association of Official Analytical Chemists (AOAC) official method 2013.05 recommends 934-AH™ or GF/B circles, 90 mm for the determination of total aflatoxins in olive oil, peanut oil and sesame oil.

Filtration devices

Key application: chemical analysis

Chemical analyses are commonly performed using analytic instrumentation. Filtration of samples prior to analysis is good practice in order to remove unwanted particles from the analysis and to protect delicate instrumentation from potentially damaging compounds. Key to good sample preparation is selection of an appropriate filter membrane and device. General guidelines on membrane compatibility can be found in the following table. Selection of a broadly compatible membranes such as regenerated cellulose (RC) and hydrophilic polytetrafluoroethylene (H-PTFE) are recommended.

Characteristics of common membranes

Filter media		ANP	CA	CN	NYL	PP	DpPP	PES	PTFE	H-PTFE	PVDF	RC	GMF

Mobile phase filtration

Whatman™ regenerated cellulose Grade 55 (RC55) and GV 050/2 vacuum filtration unit for solvent filtration

Use the same material for mobile phase filtration and sample filtration to:

- Reduce variation of analysis
- Reduce rate of column clogging
- Enhance lifetime of column

If in-line degassing is required, consider the Whatman™ In-line filter/degasser.

Choose from two membrane options:

- Nylon — when mobile phase is > 20% aqueous
- Polypropylene — for non-aqueous solvents

Syringe filters for preventative care

Filtration of your samples is important as a preventive maintenance step for HPLC or UHPLC analysis. Keep unwanted particulate matter from entering the injector to increase column life, shorten run time, and optimize peak shape.

Whatman™ brand Puradisc™ syringe filters

The workhorse of the lab, high performance syringe filters deliver premium quality and reliability.

- Choice of filter sizes (4, 13, 25 or 30 mm) to minimize sample loss
- Available in 11 membrane types to support a variety of applications
- Pigment-free polypropylene (polycarbonate for Puradisc™ 30 mm and Puradisc™ Aqua)

Whatman™ brand Uniflo™ syringe filters

Reliable quality, economical portfolio for basic applications.

- Choice of filter sizes: 13, 25 or 30 mm
- Available in 6 membrane types
- Laser etched printing on the filter for easy identification

Sterile Uniflo™ syringe filters

Certified quality for method development: SPARTAN™ filters

Whatman™ brand SPARTAN™ syringe filters are HPLC-certified for confidence and consistent results. Tested and certified for the absence of UV-absorbing substances (210 and 254 nm) with water, methanol, acetonitrile to ensure absence of interfering substances.

- Hydrophilic, low protein-binding membrane made of regenerated cellulose
- Excellent chemical resistance against the standard aqueous and organic HPLC solvents
- Tested and certified for the absence of UV-absorbing substances at wavelengths of 210 and 254 nm with water, methanol, and acetonitrile
- 13 mm diameter with Mini-Tip options
- 13 mm diameter with extremely low dead volume < 10 µL

SPARTAN™ syringe filters

High-particulate, challenging sample filtration: Whatman GD/X™ filters

Filter even the most difficult samples and use less hand pressure with Whatman GD/X™ syringe filters.

- Exceptional loading capacity and fast flow rates – prevents back pressure and clogging of membrane
- Graduated microfiber prefilter from 1 µm to 0.7 µm
- Higher flow rates (3×) compared to unprotected membranes
- Uses glass microfiber-based prefilters

For metals testing and other applications where glass-based compounds could interfere with analysis, we offer a related syringe filter (GD/XP), which uses polypropylene prefilters.

Whatman GD/X™ syringe filters contain several filtration layers that substantially reduce blockage and increase volume throughput

Typical data

Whatman GD/X™ syringe filters

Membrane	Whatman GD/X™ 13 mm	Whatman GD/X™ 25 mm
Housing	Polypropylene (pigment-free)	Polypropylene(pigment-free)

Whatman™ GD/XP syringe filter

Autosampler and workflow support: Mini-UniPrep™ filters

Mini-UniPrep™ syringeless filters — polypropylene or glass chambers

The Mini-UniPrep™ syringeless filters are compatible with most autosamplers.

- Easy-to-use design supports sample preparation outside of the lab if needed
- Process samples in one-third the time of traditional syringe filtration
- Replaces syringe, syringe filter, vial, and cap in one consumable
- Polypropylene or glass chamber options to prevent interference from chemical leaching
- Amber vials available for light sensitive samples
- Multi-compressors available for ease of use
- 12 × 33 mm vial can be used to filter up to 400 µL

Autovial™ syringeless filters

Autovial™ syringeless filters replace syringe-coupled filtration devices with a single, convenient disposable unit. Consisting of a plunger and a graduated filter barrel with a choice of filtration media, Autovial™ speeds sample preparation — so you can get more work done in less time. Simply pour the sample directly into the filter barrel, insert the plunger, and compress the unit. The filter barrel has a support stand to protect the slip Luer outlet. Autovial™ syringeless filters are designed for filtration both into an autosampler and through direct instrument injection, by connecting a needle to the slip Luer outlet.

General laboratory accessories

Description	Product name	Dimension	Quantity	Product code
Phase separation paper • Separatory funnel replacement: Automatic cut-off • Ease of use: No special training required	1PS Phase separator paper	Diam. 125 mm	100/pack	2200-125
		Diam. 150 mm	100/pack	2200-150
Optical lens cleaning tissue • Soft tissue for removing surface moisture and grease from lenses and other optical surfaces	Grade 105	100 × 150 mm	25 wallets of 25 sheets	2105-841
		200 × 300 mm	100/pack	2105-862
Benchkote™ bench protection papers • High-quality, smooth, absorbent Whatman™ paper • Quickly absorbs liquid spills and protects the working surface • Benchkote™ Plus is thicker and more absorbent	Benchkote™	460 × 570 mm	50/pack	2300-916
		460 mm × 50 m	1/pack	2300-731
	Benchkote™ Plus	500 × 600 mm	50/pack	2301-6150
		600 mm × 50 m	1/pack	2301-6160
pH indicator paper • Range of pH indicator and test papers for rapid results	Color Bonded, 0.0 to 14.0 range	6 × 80 mm	100 strips, 1/pack	2613-991
	Standard Full Range, Reel, 1.0 to 14.0 range	7 mm × 5 m	1/pack	2600-100A
	Standard Narrow Range, Reel, 4.0 to 7.0 range	7 mm × 5 m	1/pack	2600-102A
Pump protection filters • Protects vacuum pump systems from aqueous aerosols. Hydrophobic PTFE membranes retain 99.99% of airborne particles > 0.1 µm	VACU-GUARD	50 mm	10/pack	6722-5000
Weighing papers • Reliably allow samples to be transferred to scales without adding unwanted substances that could impact analytical results	Grade 2122 weighing paper	100 × 100 m*	500/pack	10347893

Polydisc in-line filter

Filtration hardware and accessories

Description	Product name	Dimension	Quantity	Product code
Filtration flask assembly for batch filtration - Consists of a 250 ml glass filtration funnel and 1000 ml flask, funnel base, top, and clamp - Suited for use with Whatman™ filtration membranes	GV050/2 vacuum filtration unit	–	–	10442200
Pressure filtration apparatus - Stainless steel - Infusion vessel 2200 ml	MD142/5/3	142 mm	1	10451610
Pressure filter holder - PTFE - Infusion vessel 1500 ml	MD142/7/3	142 mm	1	10451710
3-piece filter funnel - For quick and easy filtration - Choice of 3 plates	Filter funnel	47 mm	1	1950-004
	Filter funnel	90 mm	1	1950-009
	Filter funnel	70 mm	1	1950-017
Membrane holder - Produced from borosilicate glass - Suitable for aqueous and organic solvent filtration	Vacuum-type glass membrane holder	47 mm	1	1960-004
	Vacuum-type glass membrane holder	90 mm	1	1960-009

3- piece filter funnel

Chemical compatibility of membranes and housings*

Selecting the right filter depends on the solvent that you are using for your application. This table will help ensure that you get it right the first time.

Solvent	ANP	CA	CN	PC	PE	GMF	NYL	PP	DpPP	PES	H-PTFE	PTFE‡	PVDF	RC
